

Brussels,

Ethical Code of correct Practice

I, *name of person*, representative of *name of company*, member of the European Glass Recycling Federation FERVER, hereby subscribe to the ethical code of correct practice, formulated below, in order to keep cullet as a valuable alternative raw material as pure as possible, so as to facilitate its use in the production of new packaging glass.

Article 1

I will conduct my activities in such a way as to promote continuously growing mutual confidence between the members and third parties, with respect to the sector and the Federation.

Article 2

I commit myself to work in accordance with the customs and laws which prevail in the field of environmental protection, including measures concerning taxation. I will behave in a collegial way towards the other members of the Federation.

Article 3

I commit myself to ensuring that environmental protection is a priority for our management and that the realization and the development of our industrial activities are fully consistent with this priority.

Article 4

I fully accept that it is absolutely forbidden deliberately to add substances or elements such as heat resistant glass or heavy metal containing glass to the Furnace Ready Cullet we supply to packaging glass or float glass producers.

Article 5

I undertake always to support the Federation as the authority which expresses and defends the common interests of our profession.
